## The Ultimate Client Experience

The **SlimLine POD** is the newest, most technologically advanced capsule from **Sybaritic, Inc.**, the original inventor and worldwide leader of the spa and medical capsule industry. With over 30,000 capsule installations around the globe, **Sybaritic** spa and medical capsules are recognized as the industry's most innovative capsules available today.

Today's clients expect to receive top-of-the-line body services with the latest scientific technology for immediate results. Clients often find themselves booking body care appointments to enjoy the added benefits of total relaxation and ultimate pampering. With **SlimLine POD**, your services will provide great results to exceed your clients' expectations.

**SlimLine POD** allows you to offer a number of profitable services with only one machine, while providing a personal sanctuary for your clients. Ideal to compliment any spa service technique, this device will become the most requested, most valuable and most used body capsule in your spa or fitness center.

Products like mud, clay or other specialized body masks are among the most popular services offered on spa menus. Because body wraps and masks are essentially a cold process, the ability to provide heat is critical for maximum efficacy and client comfort.

**SlimLine POD** provides the perfect heated environment to compliment these treatments. The device also maintains the desired heat levels throughout the duration of the service, resulting in more effective end results for your product services and ensuring maximum comfort for your clients.

The **SlimLine POD** system includes a whole body chamber LED configuration to additionally enhance body services. **Sybaritic's** aesthetic researchers, including physicians and bio-medical engineers, have incorporated LED light technology research into proprietary wavelengths for optimal results.

Pre-set programming has been designed to offer **SlimLine POD** users a variety of effective session programs at the push of a button to simplify the service process for the user and the technician. However **SlimLine POD** also offers the unique versatility for the user to adjust feature levels during any session to maximize comfort.

**FEATURES:** The following features are available on the **SlimLine POD** system and are manually adjustable during each session.

- Dry Heat • Body Chamber LED System • Aromas • Vibratory Massage Bed
- Cool Facial Air • Wake Up Alarm

The upgraded **SlimLine POD Deluxe** system includes an LED facial surround system for enhanced facial services. New scientific research, including discoveries by NASA scientists, has proven LED light induces a process in skin cells similar to photosynthesis in plants. Select LED light wavelengths provide a variety of benefits specific to the wavelength used. **Sybaritic's** aesthetic researchers, including physicians and bio-medical engineers, have incorporated SI-LED light technology research into the proprietary wavelengths that deliver specific dosages to the skin for optimal results.
